10 YEARS ANNIVERSARY OF ROMANIAN SOCIETY OF HADRONTHERAPY

Romanian Society of Hadrontherapy (RSH) is a professional and scientific organization, where medical doctors and other professionals with superior training (physicists, biologists, chemists, biophysicists, engineers, etc.) work in the fields concerning the use of hadrons in diagnosis and medical treatment and militates for the study, implementation and development of hadrontherapy in Romania.

Aims and achievements

The Romanian Society of Hadrontherapy has performed the following actions in order to fulfill our goals.

It has organized every year the National Conferences of Hadrons Applications in Medicine and other forms of scientific events, on the use of hadrons in diagnostic and medical treatment (sessions of communications and presentations, round tables with specific themes, conferences and lectures, symposia), which had been attended by researchers, engineers, physicists and doctors from our country and abroad.

An annual scientific meeting has been organized which represents a total of the hadronotherapy activity held in our country that year. It has ensured the publication of scientific events papers delivered in the context of the Society's events.

It had initiated, promoted and organized scientific collaboration with organizations, laboratories, institutes, societies of hadrontherapy, etc. from other countries to which it is affiliated to or which are affiliated to it. It has promoted internationally the prestigious achievements obtained in the domain of hadrons use in the diagnosis and medical treatment at national level.

It has proposed to the Romanian Academy, Ministry of National Education and other higher competent bodies, to fund priority research themes of hadrontherapy. It has promoted and organized in our country the research of hadrons use in fundamental and applied scientific research in the diagnosis and medical treatment by projects proposed under national research programs.

It has supported the documentation work on the field of hadrons for use it in the diagnosis and medical treatment. It campaigns for the entrance into the country (through exchange or funding from the state budget) of the most important hadrontherapy publications of the world; supported the preparation and participation of the Romanian delegation to international scientific events in the field of hadrons for use in the diagnosis and medical treatment. It insured the link between research and education in order to train highly qualified specialists in domain.

It has initiated and assisted the collaboration between laboratories, institutes and other facilities in the use of hadrons in medical diagnosis and treatment, both in the country and abroad. It has facilitated sending patients with hadrontherapy indications to be treated abroad.

Over our 10 years of existence, the Romanian Society of Hadrontherapy aims to implement hadrontherapy in Romania, the continuation of specific, interdisciplinary and multidisciplinary research, education and training of specialists, international collaboration in this field and in related areas in order to improve the performance of cancer treatment for humans.
